

Proposed names for vaccines in ECW

I am sure there are some vaccines that should have a second FFS entry that I missed – please add FFS entry when providers report that they get a particular vaccine from the state.

DTaP Daptacel FFS

DTaP ---- for historical entries, as we may not know what version the patient received

DTaP Infanrix FFS

DTP – no longer used, but need this for historical entries

Hib ActHIB FFS

Hib ActHIB - I'm not sure what version the Infusion Center uses when I send over asplenic patients

Hib Hiberix FFS

Hib Hibirix

Hib PedvaxHIB FFS

Hib ---- for historical entries, as we may not know what version the patient received

Hepatitis A Havrix

Hepatitis A Havrix FFS

Hepatitis A Vaqta

Hepatitis A ---- for historical entries, as we may not know what version the patient received

Hepatitis B Engerix-B Adults

Hepatitis B Recombivax Peds FFS

Hepatitis B Recombivax Adults

Hepatitis B ---- for historical entries, as we may not know what version the patient received

Zoster Zostavax

HPV Gardasil 9 FFS

HPV Gardasil 9

HPV Gardasil 4 – no longer used, but need this for historical entries

HPV Cervarix

HPV ---- I suggest NOT including this option – encouraging those entering the vaccine to identify if the patient got the 4 valent or 9 valent vaccine

Influenza Fluarix FFS

Influenza Fluarix

Influenza Afluria

Influenza Agriflu

Influenza Flublok

Influenza Flucelvax

Influenza FluLaval

Influenza Flumist – no longer used, but need this for historical entries

Influenza Fluzone

Influenza Fluzone HD

Influenza ---- for historical entries, as we may not know what version the patient received

MMR MMRII FFS
MMR MMRII
Measles ---- for historical entries
Mumps ---- for historical entries
Rubella ---- for historical entries

MMRV ProQuad FFS

Meningococcal Menactra FFS
Meningococcal Menactra
Meningococcal Menveo
Meningococcal Menomune
Meningococcal-B Trumenba
Meningococcal-B Bexero

Meningococcal ---- I suggest NOT entering a generic “meningococcal” entry – encouraging the user to at least distinguish between polysaccharide (Menomune) vs conjugated vaccine – I doubt anyone is using the B vaccines, but the military might be

Pneumococcal Prevnar 7 – no longer used, but need this for historical entries
Pneumococcal Prevnar 13 FFS
Pneumococcal Prevnar 13
Pneumococcal Pneumovax 23
There should NOT be a generic “Pneumococcal” choice – users need to clearly identify 7 vs 13 vs 23

IPV Ipol FFS
IPV ---- for historical entries, as we may not know what version the patient received
(I’m not sure if there was ever another IPV trade name – probably not)
OPV – no longer used, but need this for historical entries

Rabies RabAvert

Rotavirus RotaTeq FFS
Rotavirus Rotarix FFS
Rotavirus ---- for historical entries, as we may not know what version the patient received

Tdap Boostrix
Tdap Adacel FFS
Tdap Adacel
Tdap ---- for historical entries, as we may not know what version the patient received

Td FFS
Td

Varicella Varivax FFS
Varicella Varivax

DTaP-IPV Kinrix FFS
DtaP-HepB-IPV Pediarix FFS
DtaP-IPV-Hib Pentacel FFS

Hib-HepB Comvax FFS
Hib-MenCY MenHibrix
Hepatitis A-B Twinrix
